## مختبر معالج دقيق

**Exp. No: 6**

**Exp. Name: Arithmetic group**

**Experiment No.:- 6****Experiment Name: Arithmetic group.****AIM:** addition two number (16- bit).**Theory:**

**Addition** - Any 16-bit number, or the contents of a register or the contents of a memory location can be added to the contents of the accumulator and the sum is stored in the accumulator. The content of the registers can't be added directly (e.g., the contents of register B cannot be added directly to the contents of the register C). we can't add two 16-bit immediately we need to split the number into two parts (8-bit number) to be added, except one instruction (DAD) that deals with register pairs so we can use it to add two (16-bit number) directly (only HL + DE register pairs).

**Discussion:**
